What is Consciousness?

The stream of Consciousness

Demertzi & Whitfield-Gabrieli. in: *Neurology of Consciousness* 2nd ed. 2015

Demertzi et al, *Front Hum Neurosci* 2013

Demertzi, Soddu, Laureys. *Curr Opin Neurobiology* 2013

Demertzi, Vanhaudenhuyse, Noirhomme, Faymonville, Laureys, *J Physiol Paris* 2015

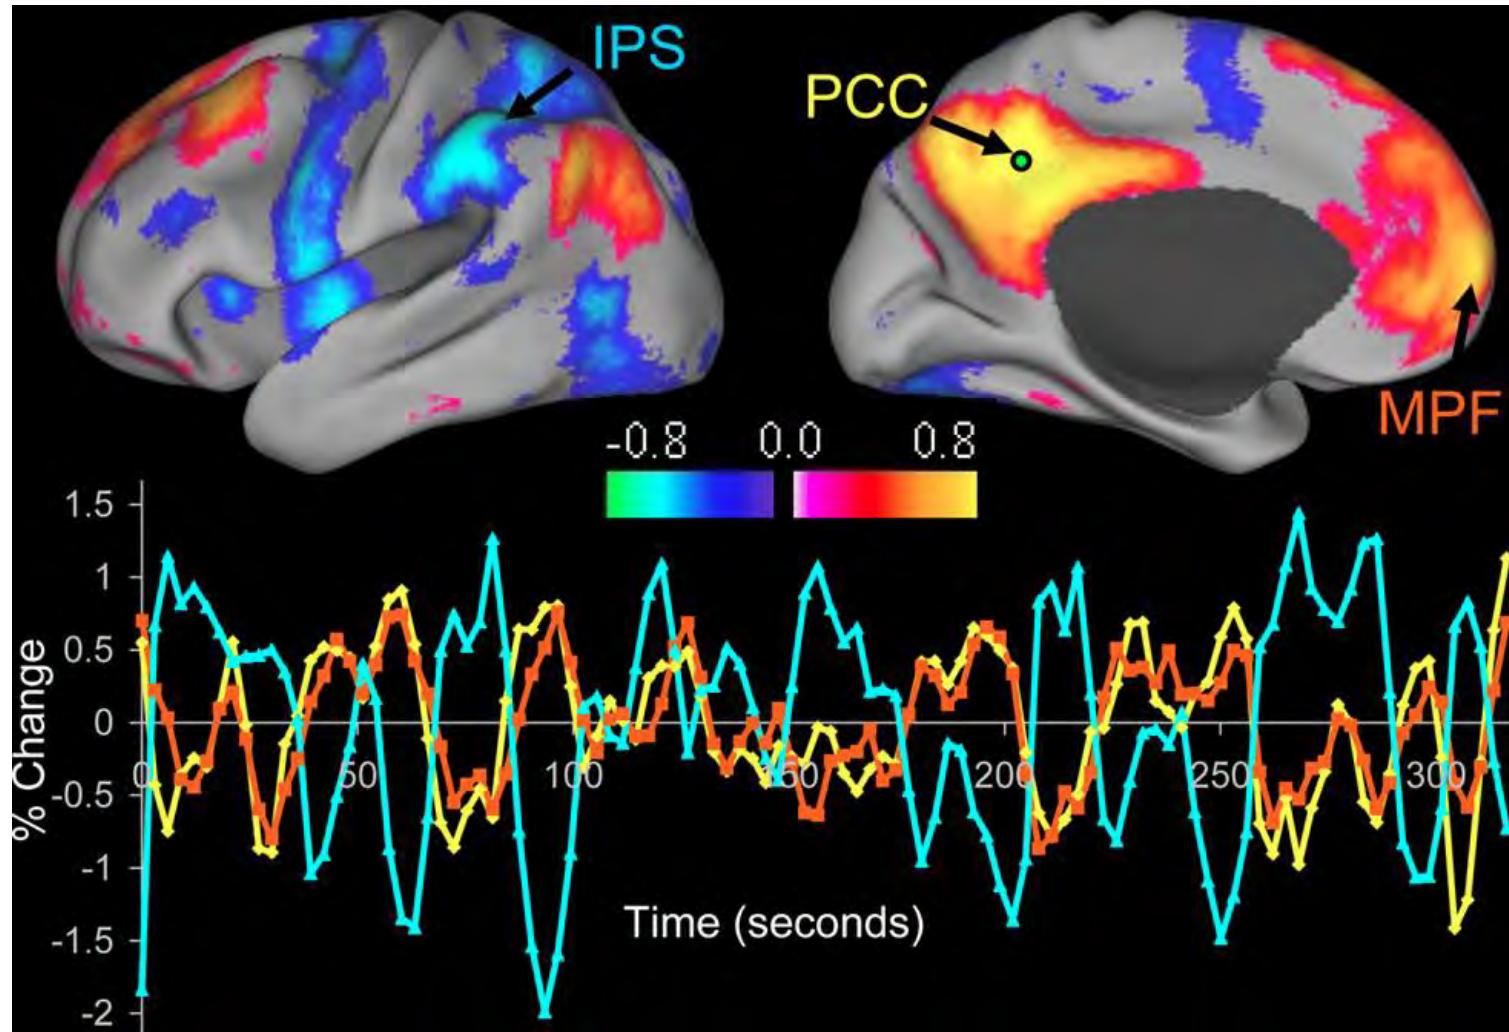

Demertzi, Soddu, Faymonville et al, *Prog Brain Res* 2011

Vanhaudenhuyse*, Demertzi* et al, *J Cogn Neurosci* 2011

Saul Steinberg

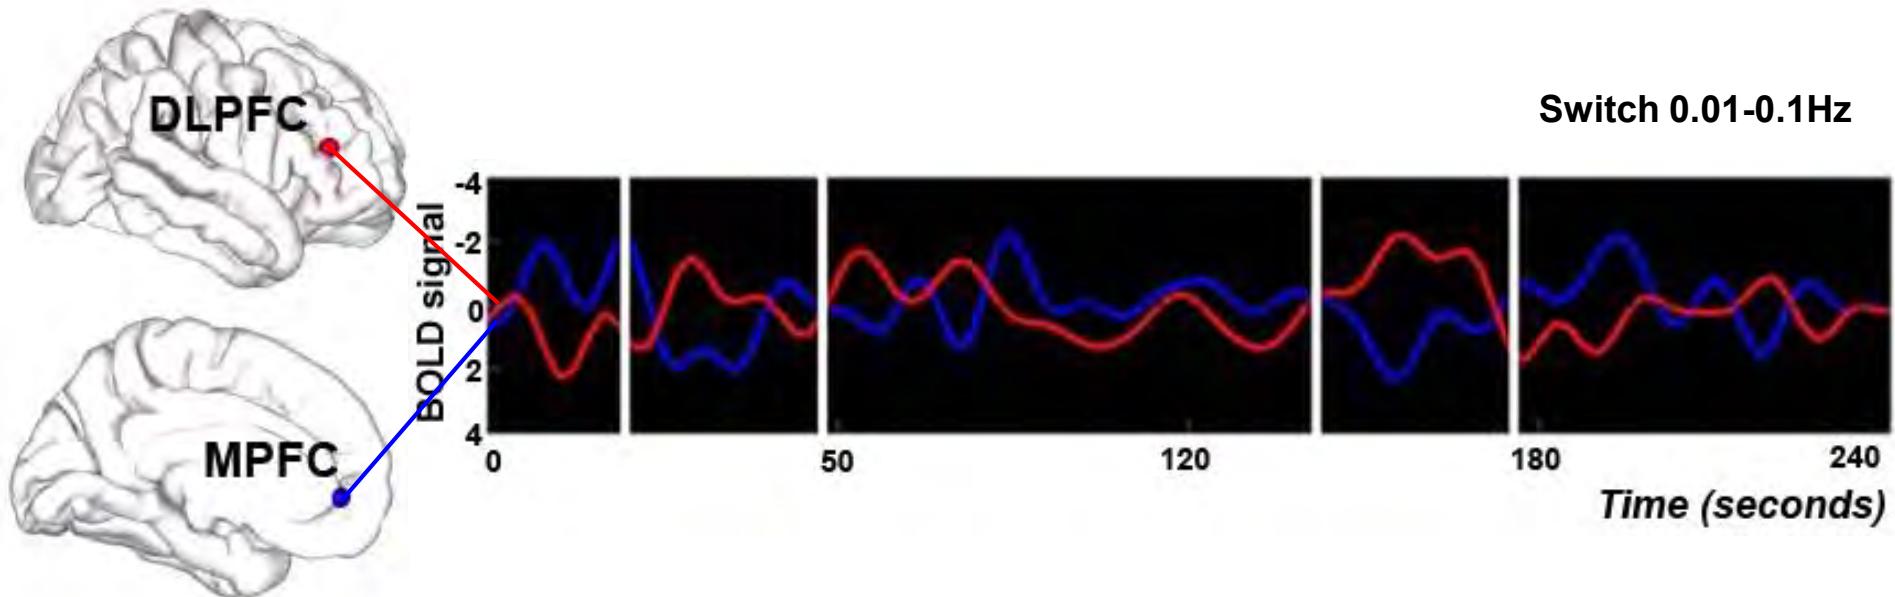

Anticorrelated brain systems

A mode of awareness?

External awareness
or anticorrelated network

Internal awareness
or Default mode network

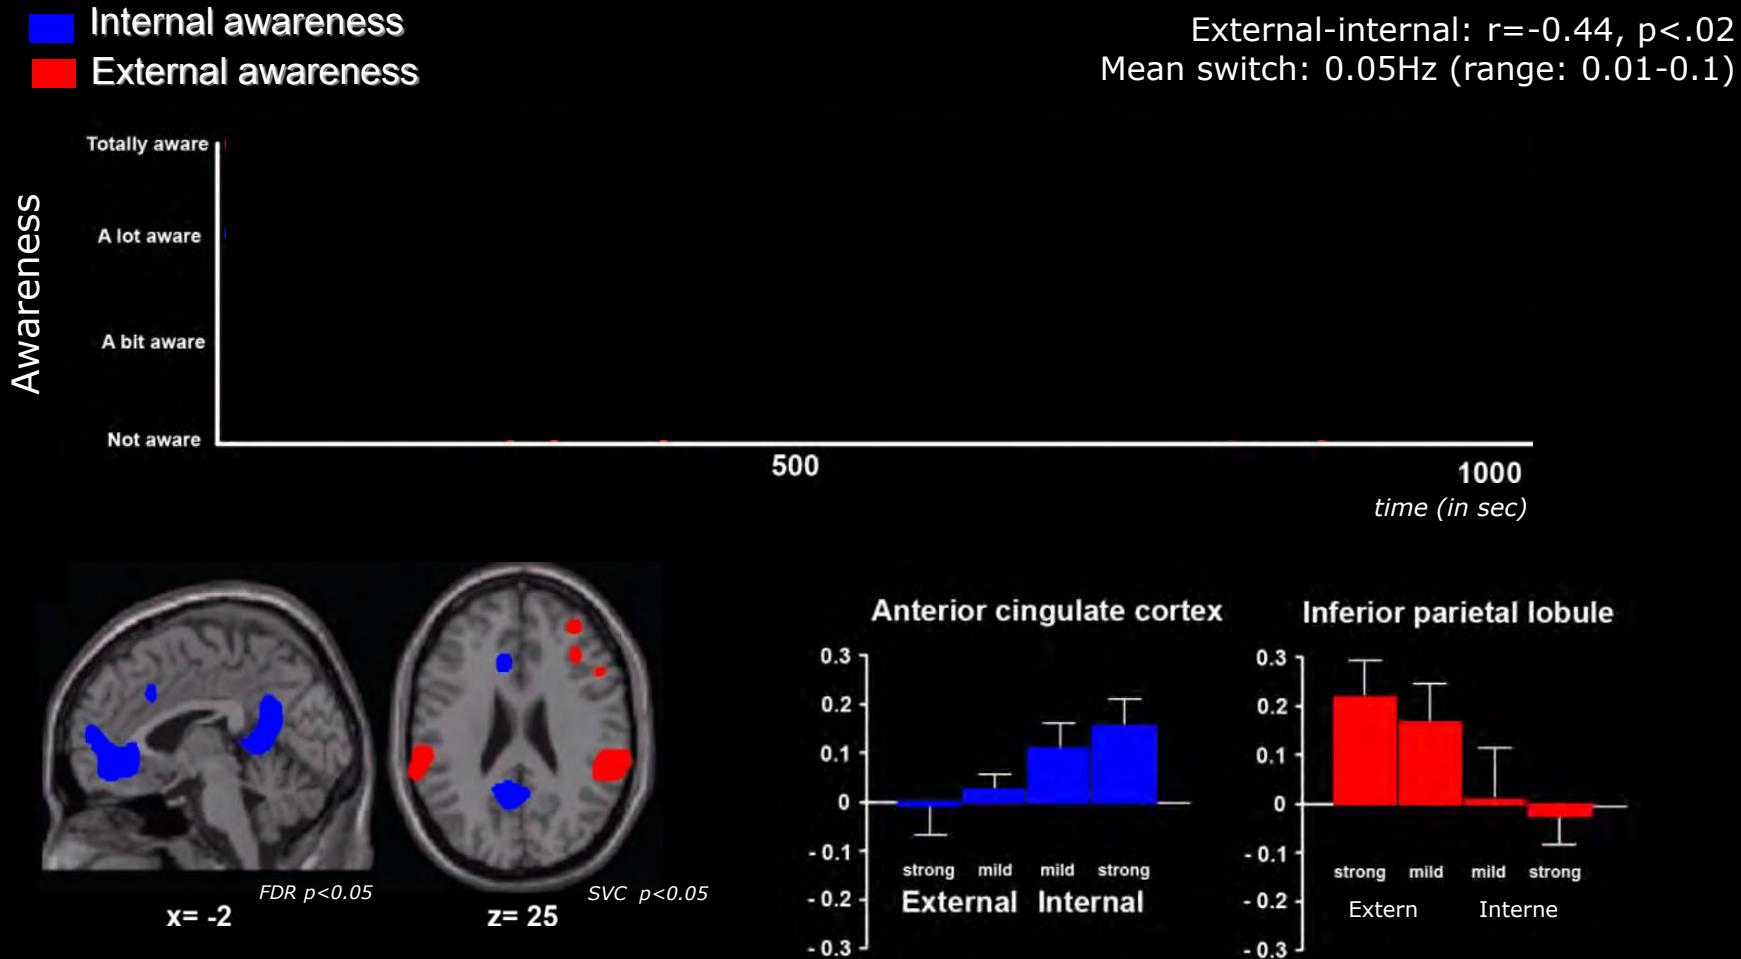

Demertzi, Soddu, Laureys, Curr Opin Neurobiology 2013

Demertzi & Whitfield-Gabrieli, in: *Neurology of Consciousness* 2nd ed. 2015

Demertzi et al, Front Hum Neurosci 2013

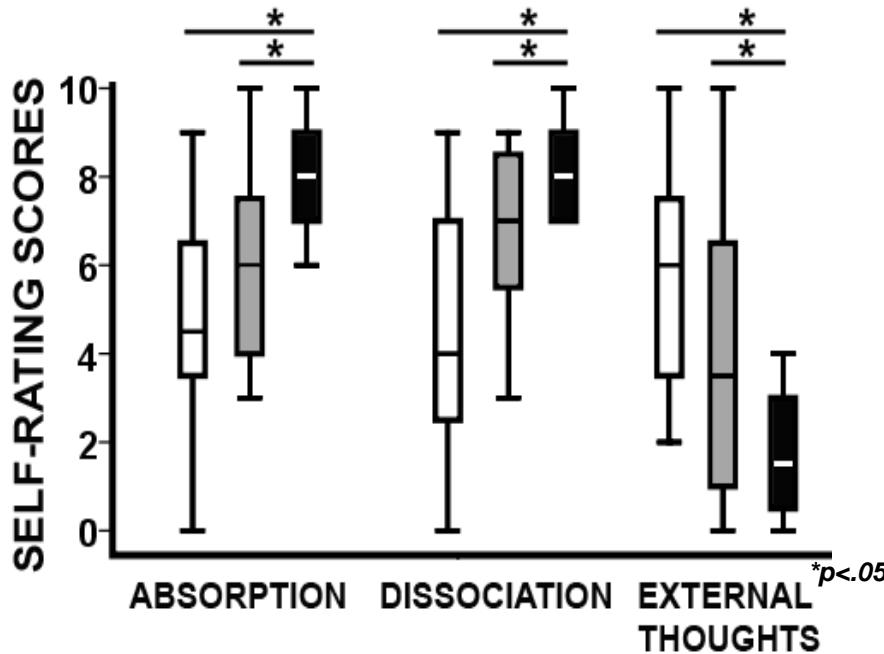

Laureys, Scientific American 2007

Neurobehavioral relevance of the anticorrelations

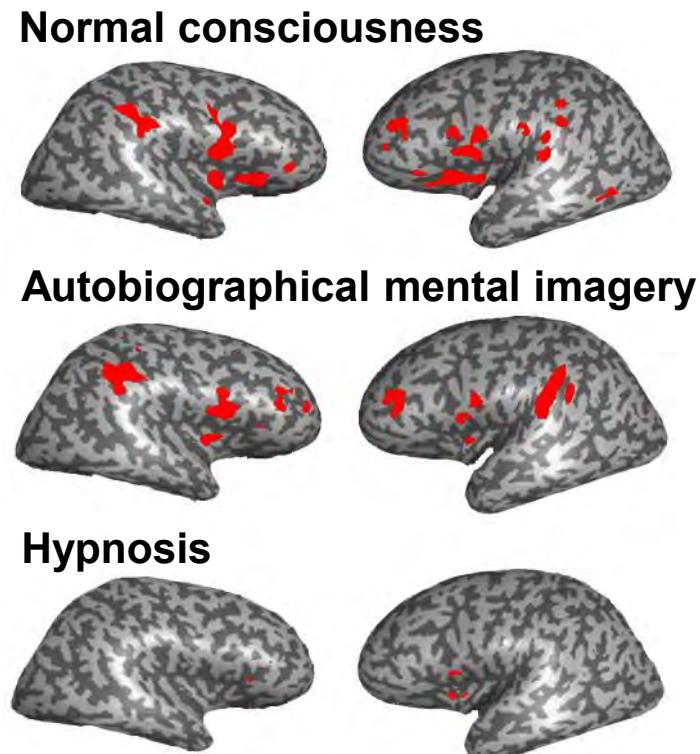

Anticorrelated connectivity is modified in hypnosis-Brain

- Normal consciousness
- Autobiographical mental imagery
- Hypnosis

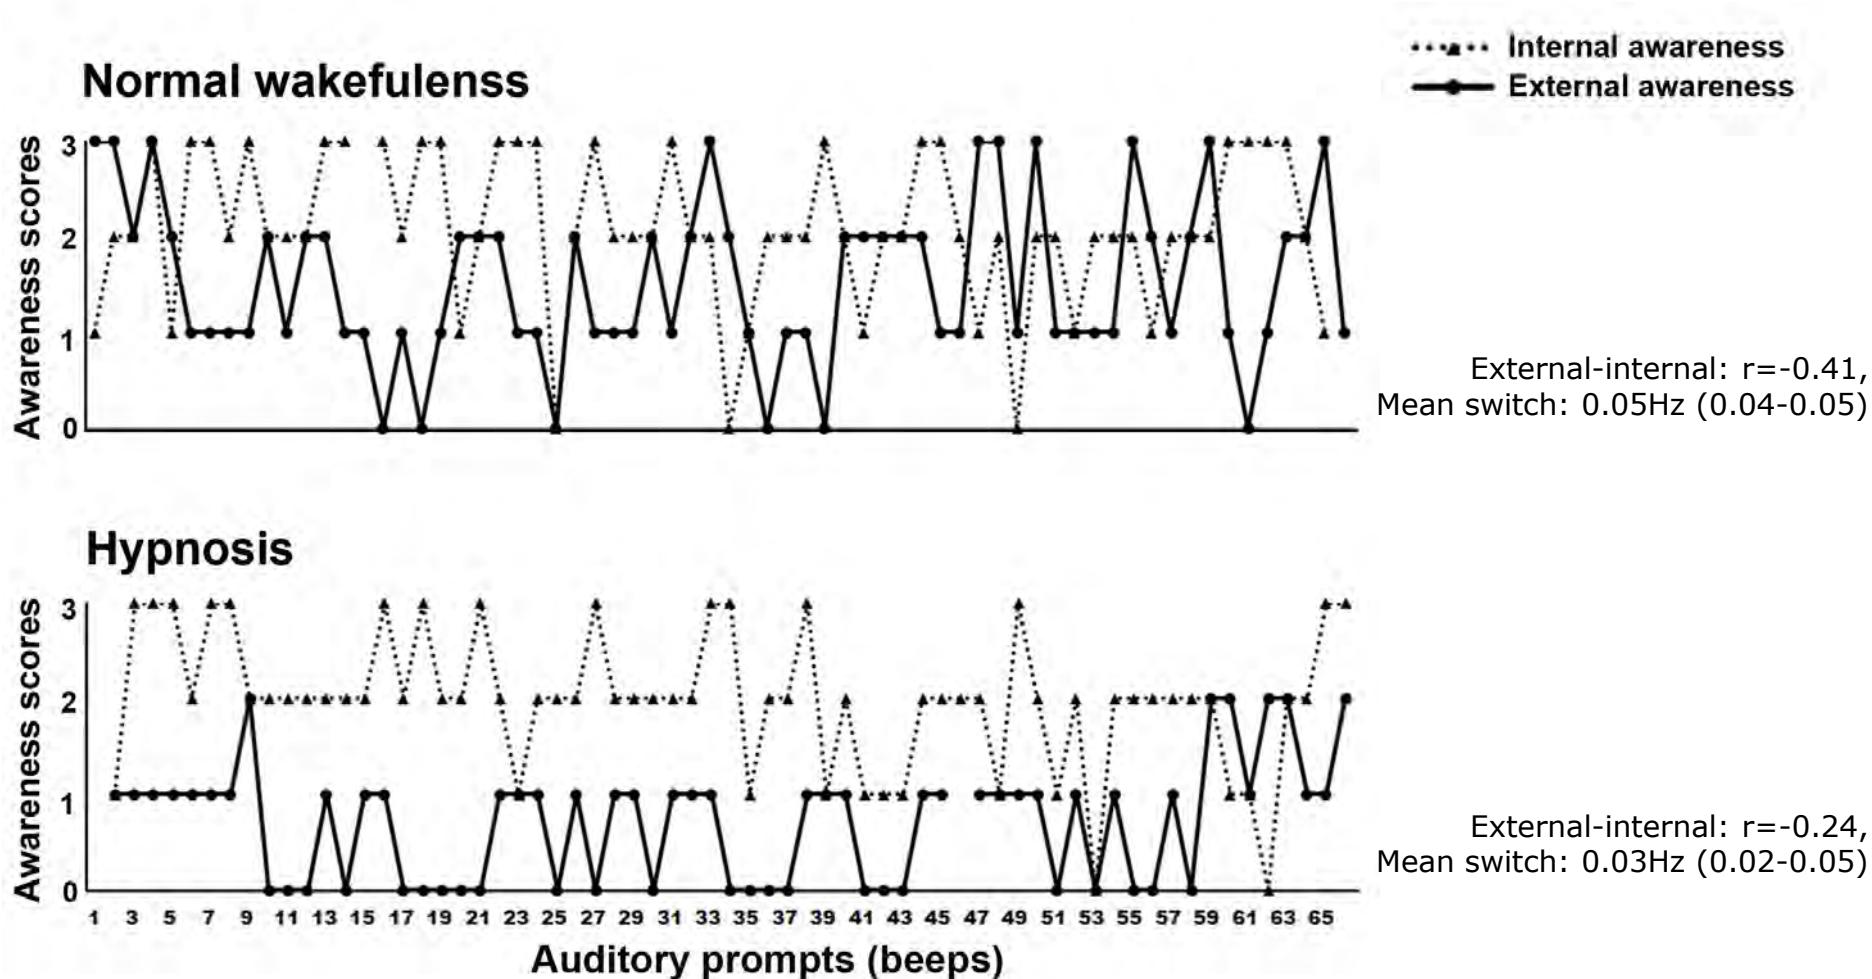

EXTRINSIC SYSTEM

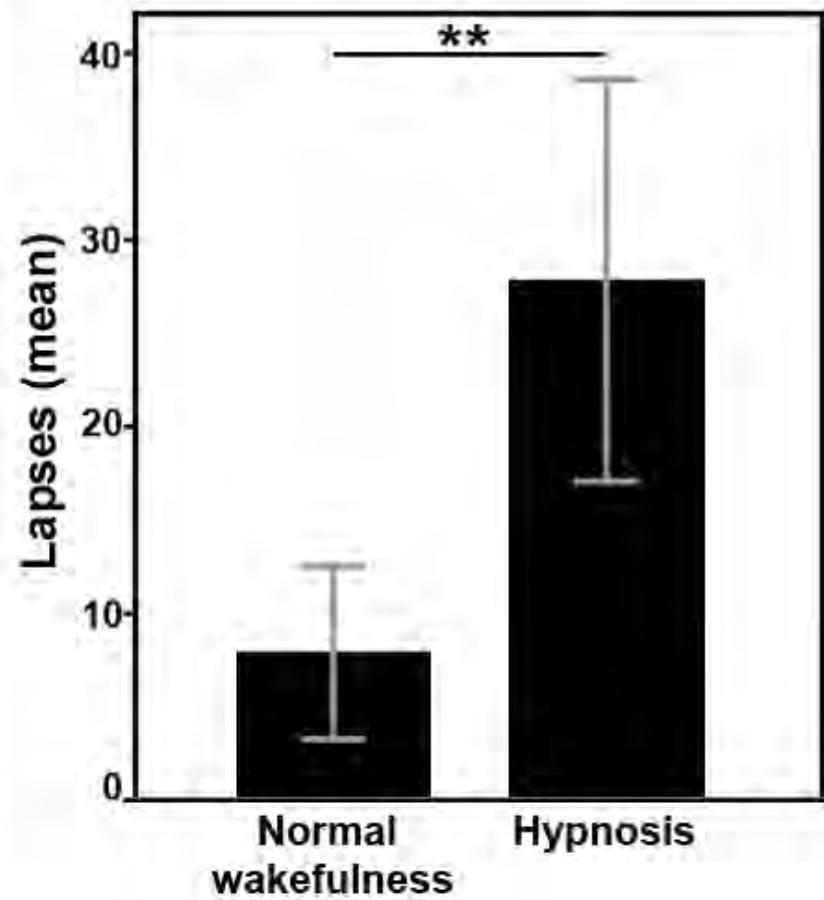

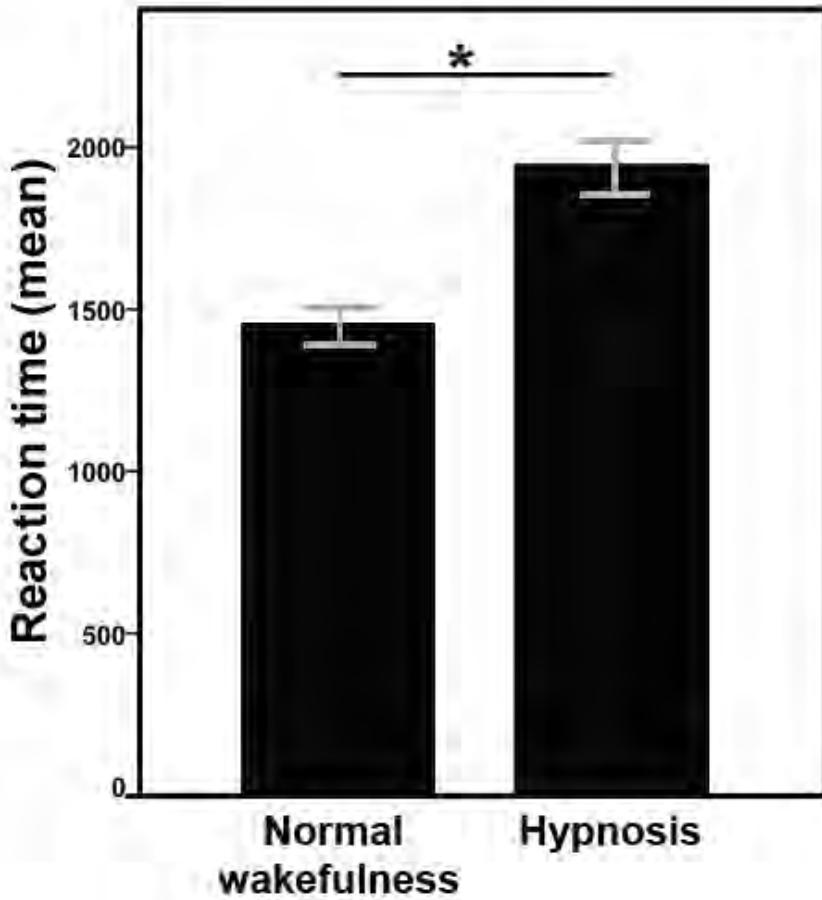

p<0.05 corrected for multiple comparisons

Anticorrelated connectivity is modified in hypnosis-Behavior

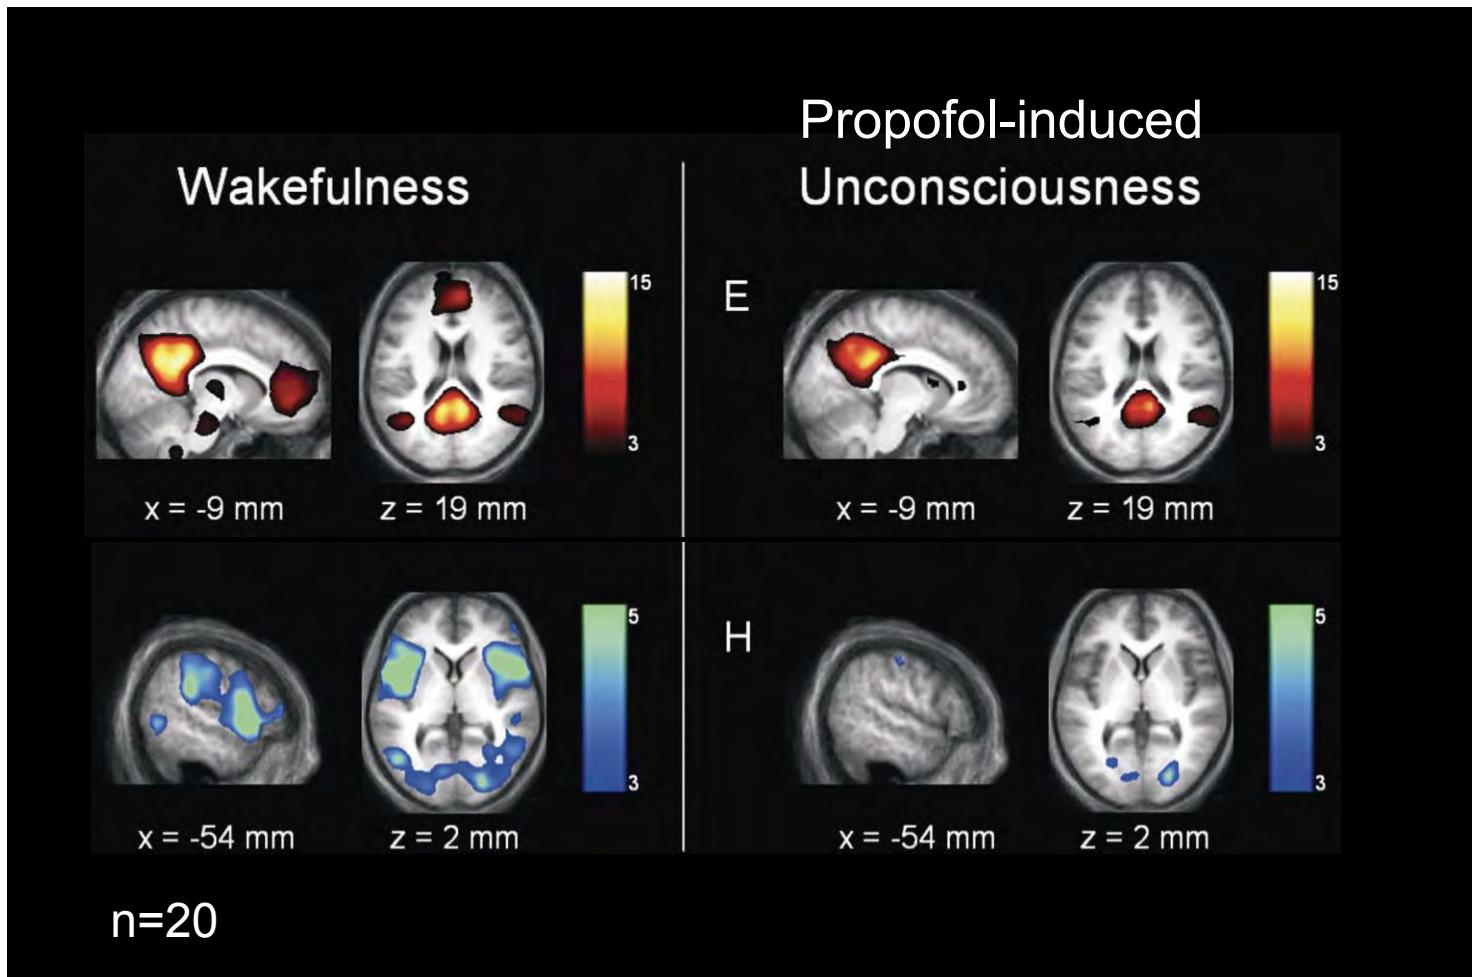

Anticorrelated connectivity is modified in hypnosis-Behavior

Anticorrelations reduce in anesthesia

Effect of environment

SCIENTIFIC REPORTS

Angelique Van Ombergen¹, Floris L. Wuyts¹, Ben Jeurissen², Jan Sijbers², Floris Vanhevel³, Steven Jillings¹, Paul M. Parizel³, Stefan Sunaert⁴, Paul H. Van de Heyning¹, Vincent Dousset⁵, Steven Laureys⁶ & Athena Demertzis^{6,7}

Anticorrelations reduce in extreme environments

Post – Pre flight

Interim conclusions

RS functional connectivity :

- is linked to behavior and task performance (*Laird et al, J Cogn Neurosci. 2011*)
- reflects physiological & pathological unconsciousness (*Heine et al, Front Psychol 2012*)
- permits single-patient automatic diagnosis (*Demertzis & Antonopoulos et al, Brain 2015*)

But

it remains unclear to what extent it provides a representative estimate of cognition

(*Peterson et al, NeuroImage Clin. 2015*)

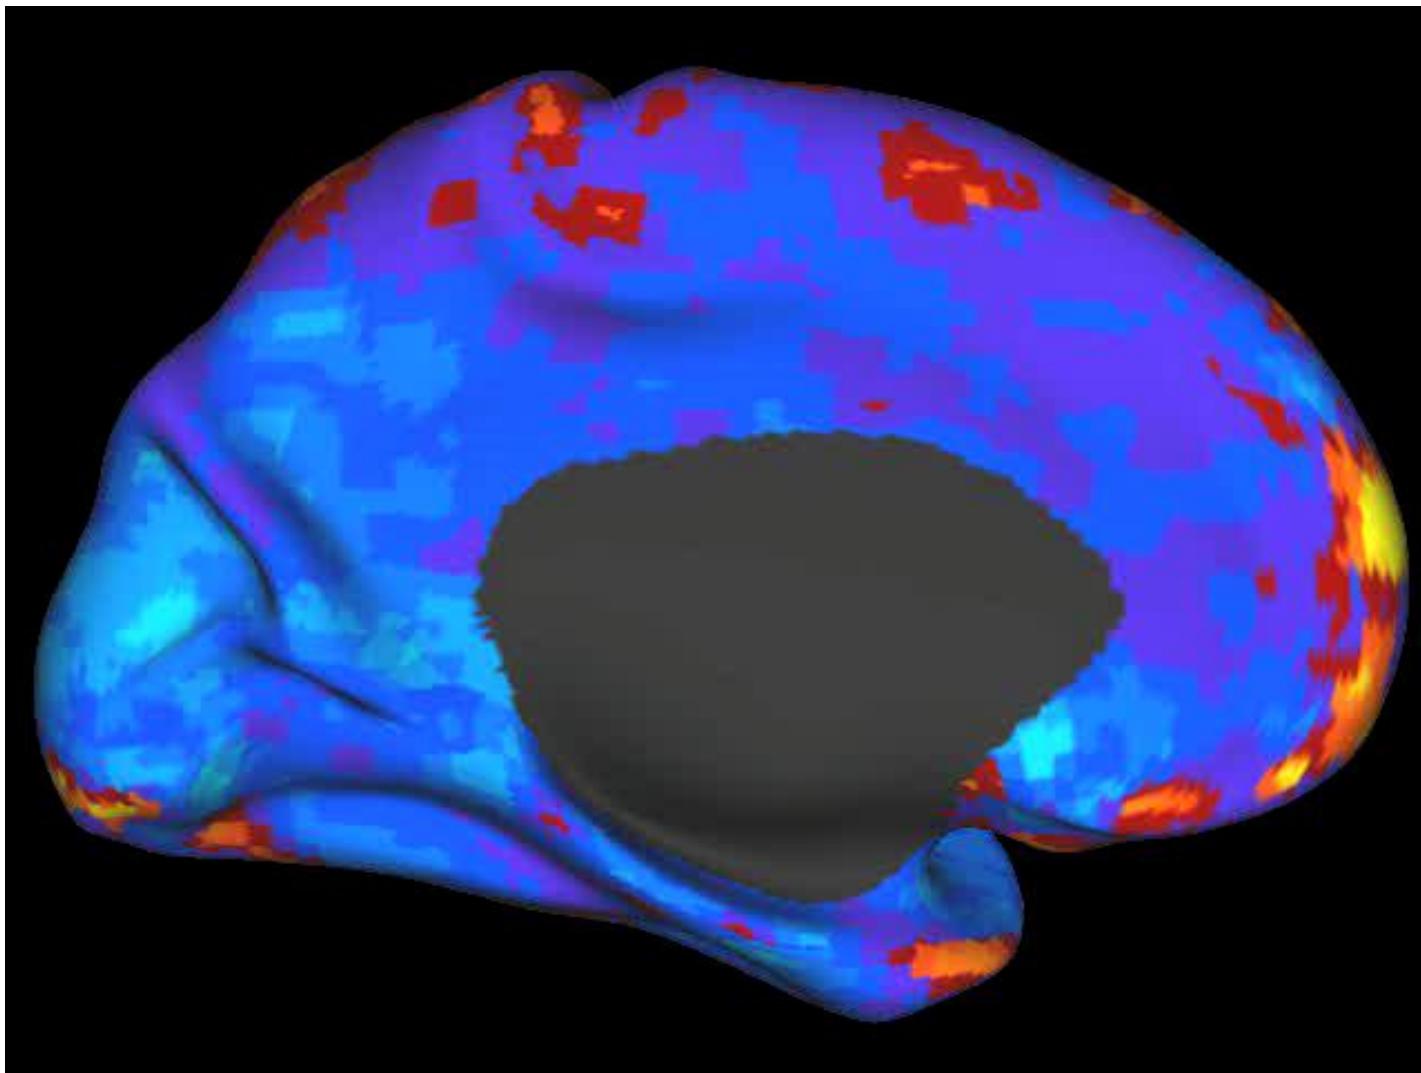

Ongoing interactions among distinct brain regions

(*Hutchison et al, NeuroImage 2013*)

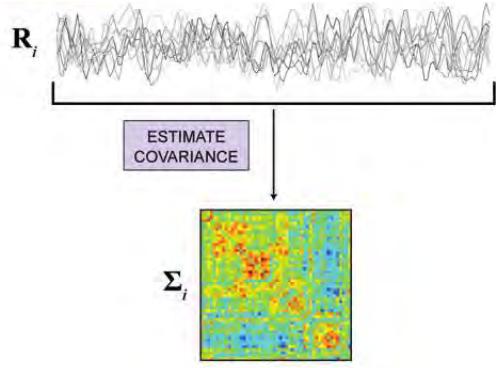

The brain is dynamic

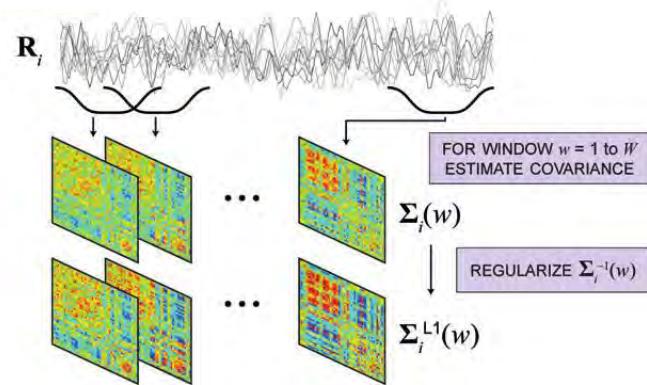

From stationarity to dynamics

Stationary fc

Time-varying fc

Dynamic

$$x_t = A \cdot x_{t-1} + \epsilon_t$$

Brain dynamics and cognition

Typical wakefulness: significance for performance, emotion and cognition

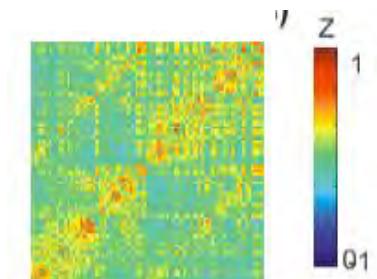

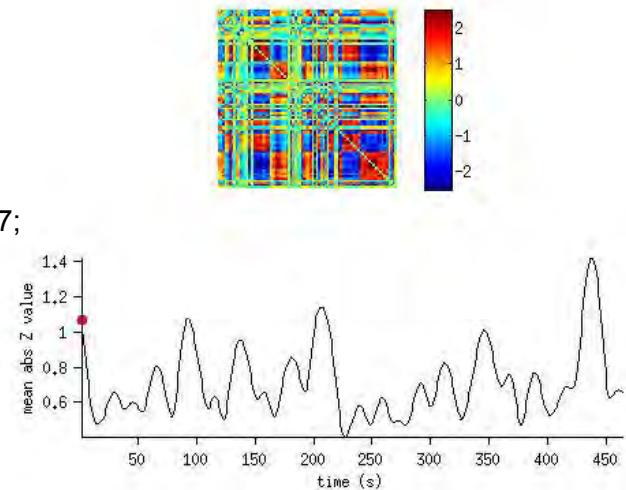

(Alavash, et al, *Neuroimage*, 2016; Shine et al., *Neuron*, 2016; Friston, *Neuroimage*, 1997; Thompson et al., *Hum. Brain Mapp*, 2013)

Unconsciousness: rigid spatiotemporal organization, less metastable dynamics

- **sleep** (Tagliazucchi et al., PNAS 2013; Wang, et al, PNAS (2016; Wilson et al., *Neuroimage* 2015; Chow et al., PNAS 2013))
- **anesthesia**
 - **in humans** (Tagliazucchi et al, *J. R. Soc. Interface*. 2016; Kafashan, et al, *Front. Neural Circuits*, 2016; Amico et al., *PLoS One* 2014)
 - **in animals** (Barttfeld PNAS . 2014); Grandjean et al., *Neuroimage*. 2017; Liang, et al, *Neuroimage* 2015).

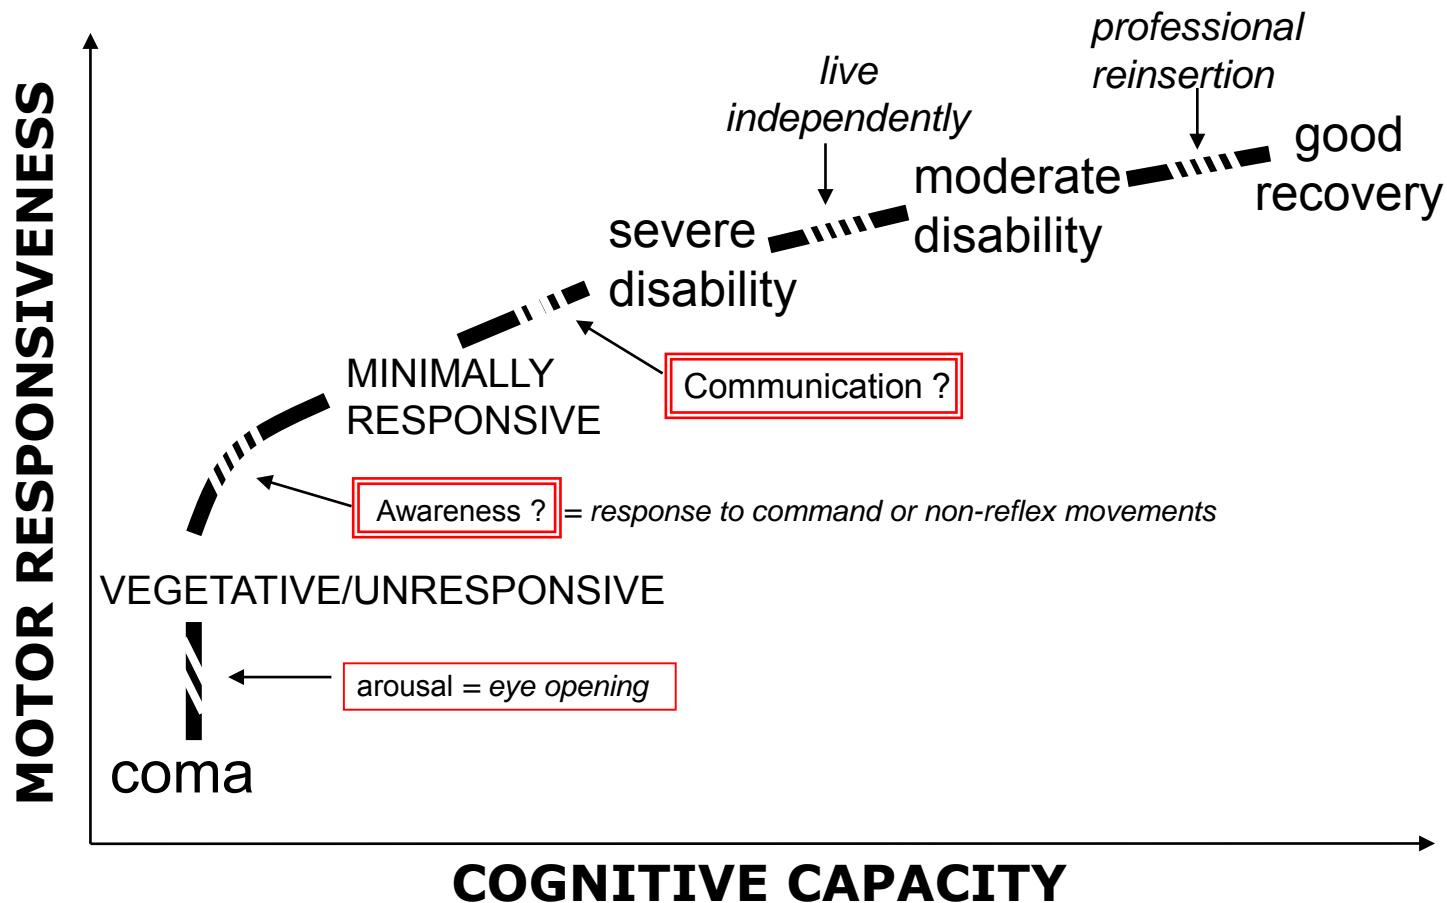

The brain cannot map the complexity of the internal and external world
(Dehaene, et al *Trends Cogn. Sci.* 2006; Tononi et al, *Nat. Rev. Neurosci.* 2016)

Barttfeld*, Ulhrig*, Sitt*, et al, PNAS 2015

$KW = 4e-11$

$UWS/MCS = 0.007$

Dynamics: Markov Process

- stochastic process that has no memory
- selection of next state depends only on current state, and not on prior states
- process is fully defined by a set of transition probabilities π_{ij}

π_{ij} = probability of selecting state j next, given that presently in state i .

Transition-probability matrix Π collects all π_{ij}

Transition-Probability Matrix

○ Example

- system with three states

$$\Pi \equiv \begin{pmatrix} \pi_{11} & \pi_{12} & \pi_{13} \\ \pi_{21} & \pi_{22} & \pi_{23} \\ \pi_{31} & \pi_{32} & \pi_{33} \end{pmatrix} = \begin{pmatrix} 0.1 & 0.5 & 0.4 \\ 0.9 & 0.1 & 0.0 \\ 0.3 & 0.3 & 0.4 \end{pmatrix}$$

If in state 1, will stay in state 1 with probability 0.1

If in state 1, will move to state 3 with probability 0.4

Never go to state 3 from state 2

○ Requirements of transition-probability matrix

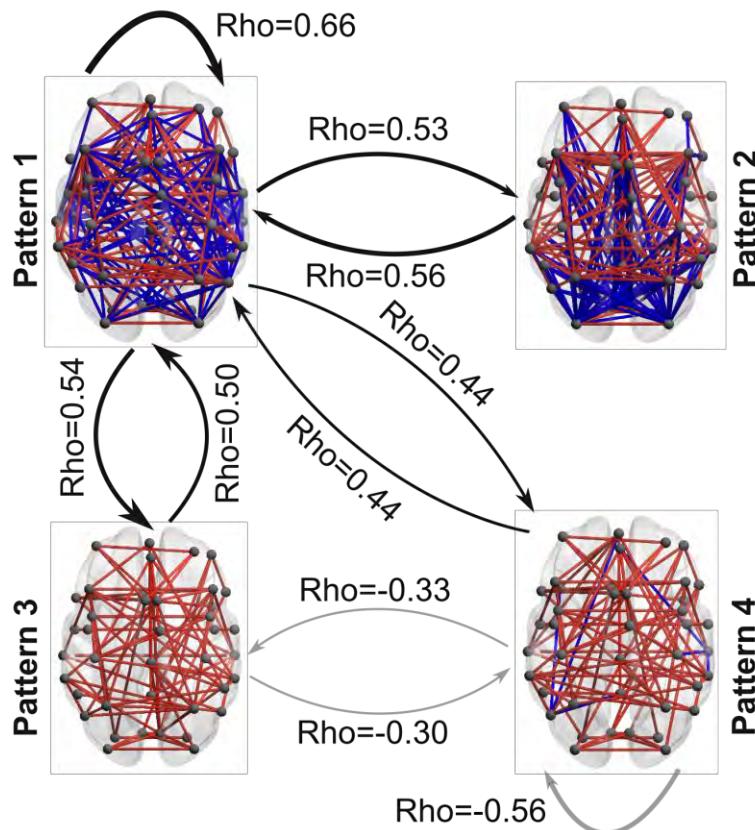

- all probabilities non-negative, and no greater than unity
- sum of each row is unity
- probability of staying in present state may be non-zero

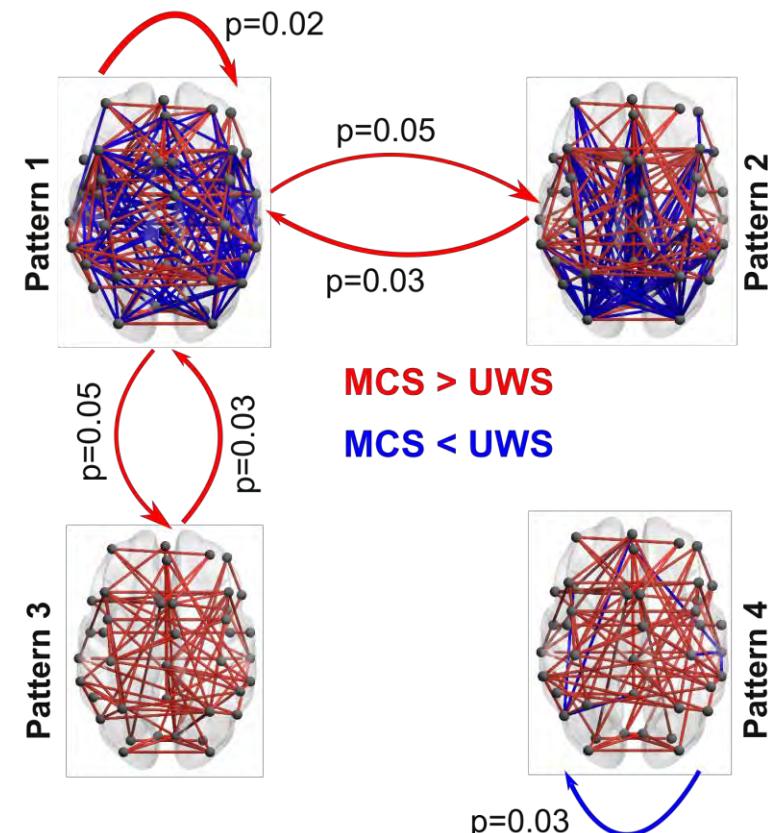

Transitions differ with respect to state of consciousness

A. Between-pattern transition probabilities

Consciousness-level dependent

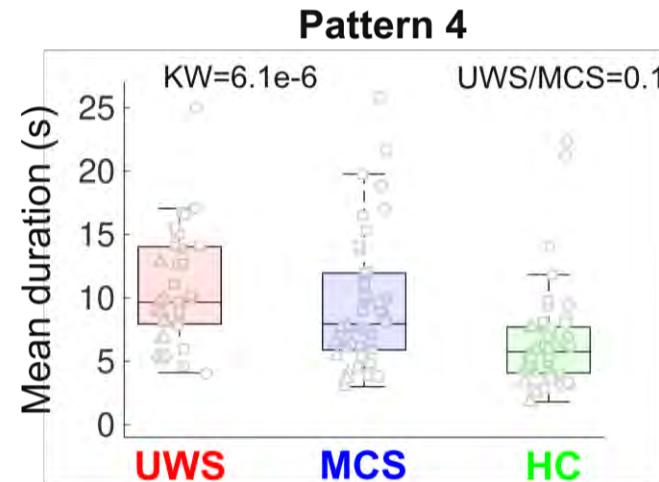

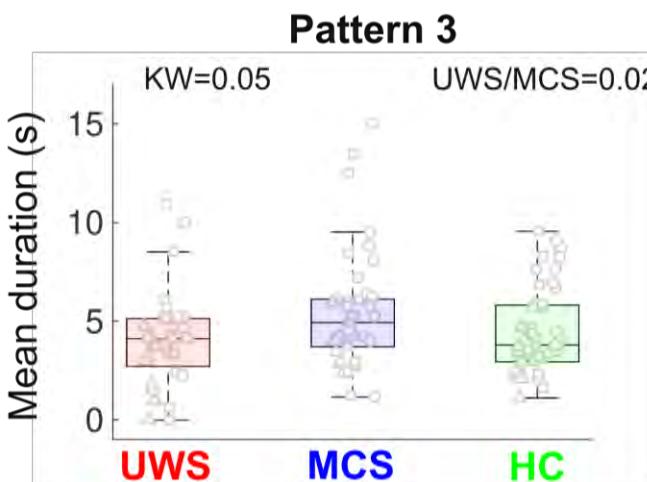

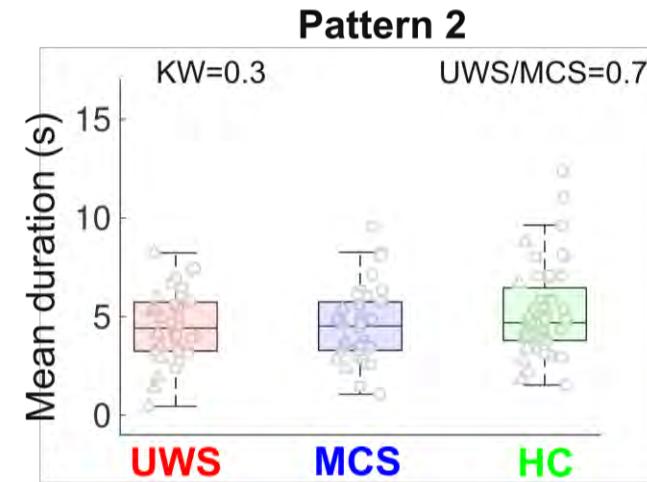

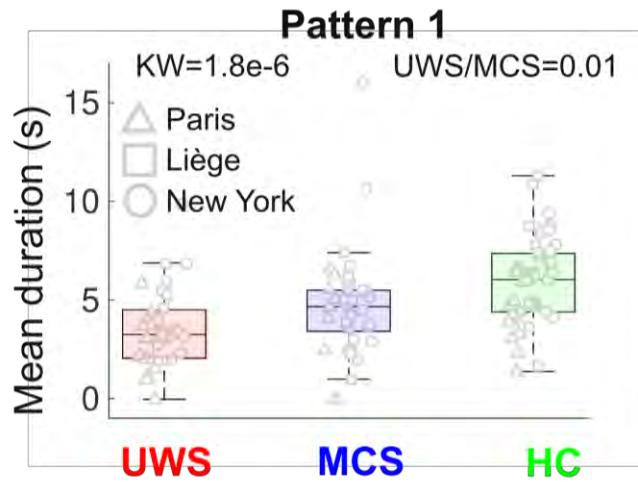

MCS vs. UWS

Pattern exploration differs with respect to state of consciousness

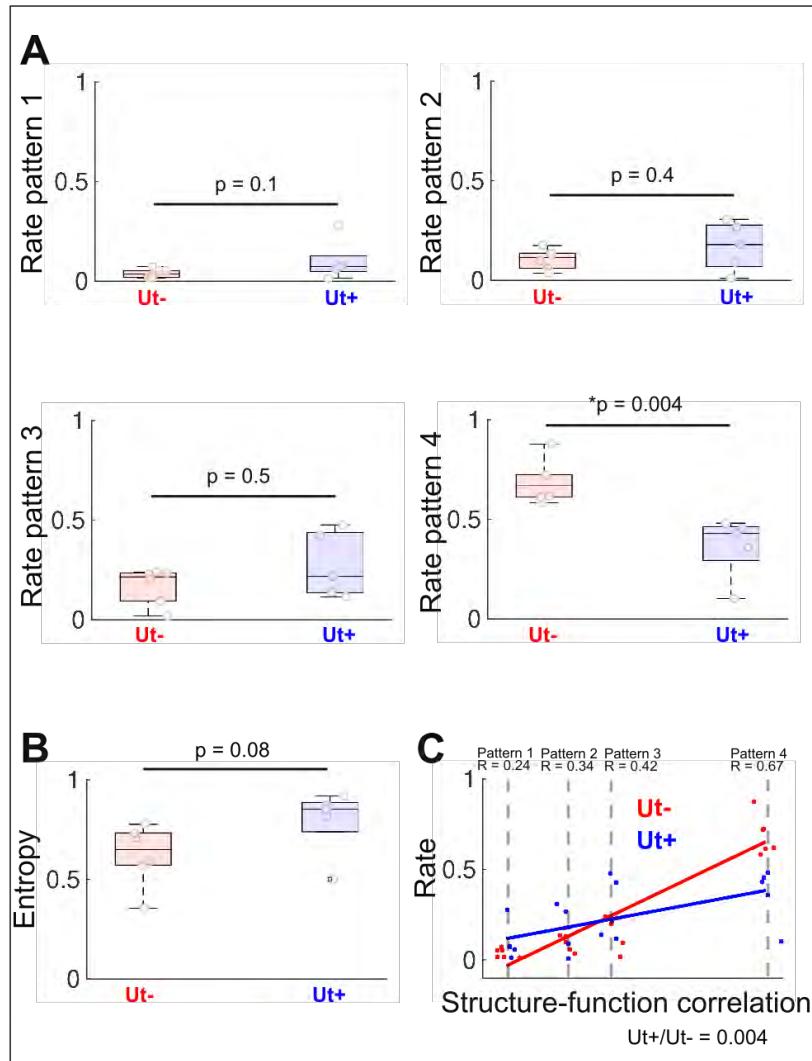

B. Duration of pattern occupation

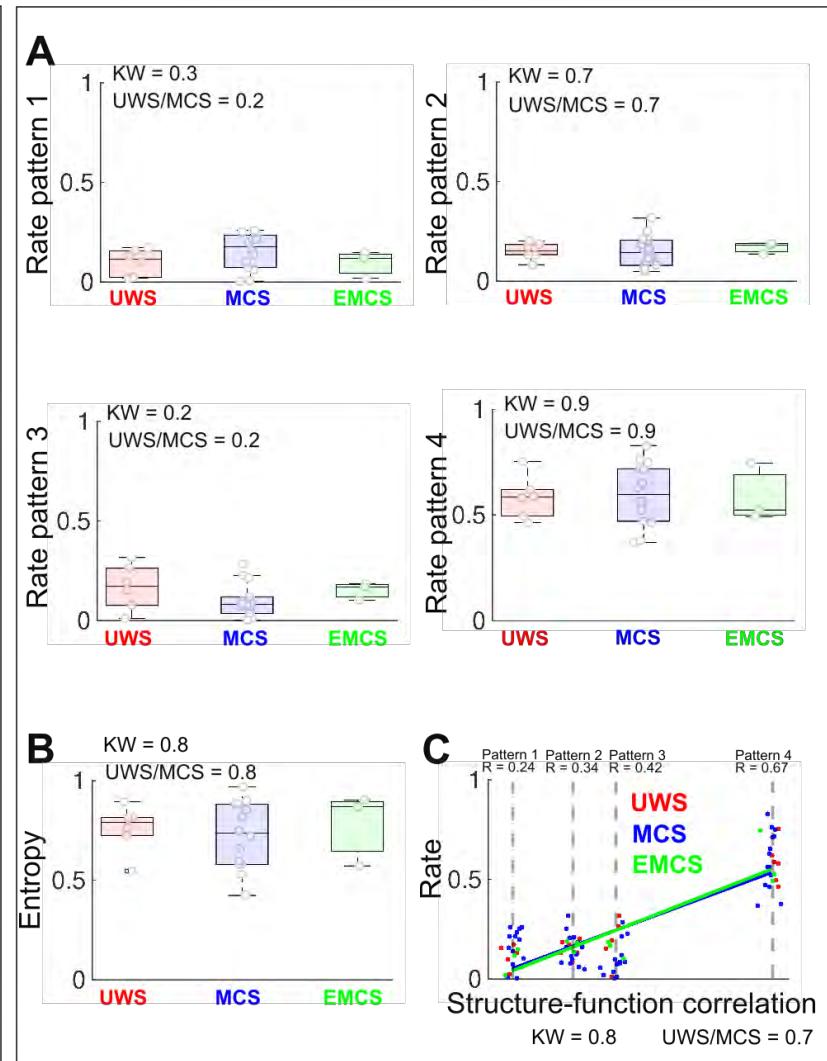

Do we measure consciousness?

Pattern prediction in cognitive-motor dissociation

Pattern prediction in anesthesia

Self = Consciousness?

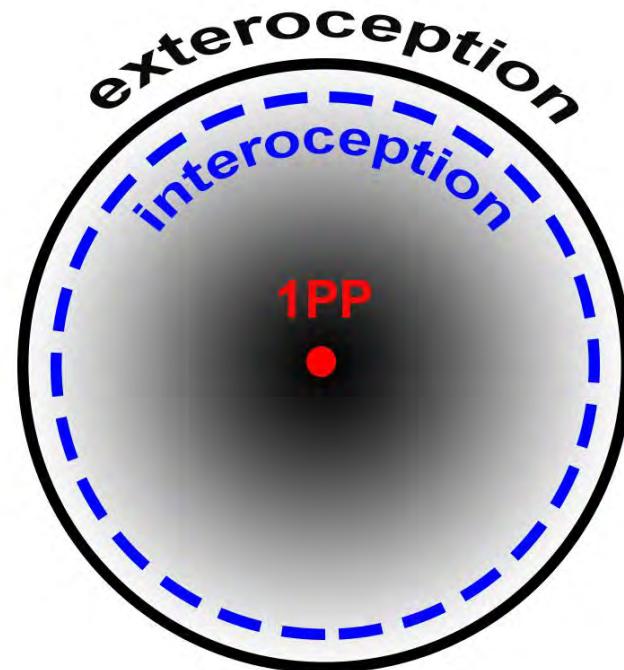

social

narrative

minimal

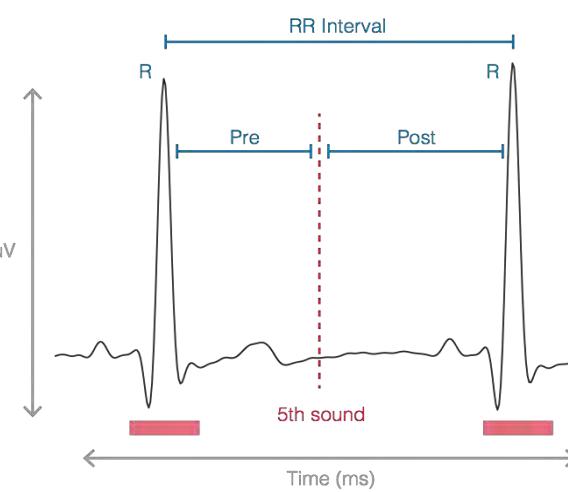

The minimal self

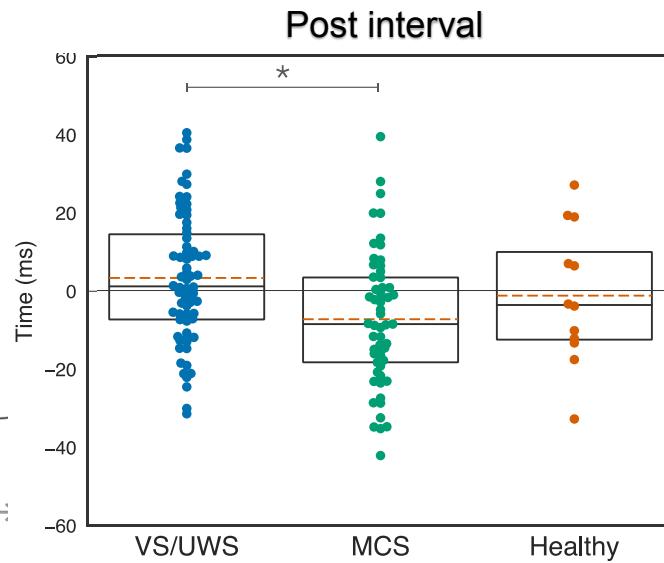

Brain-body interactions

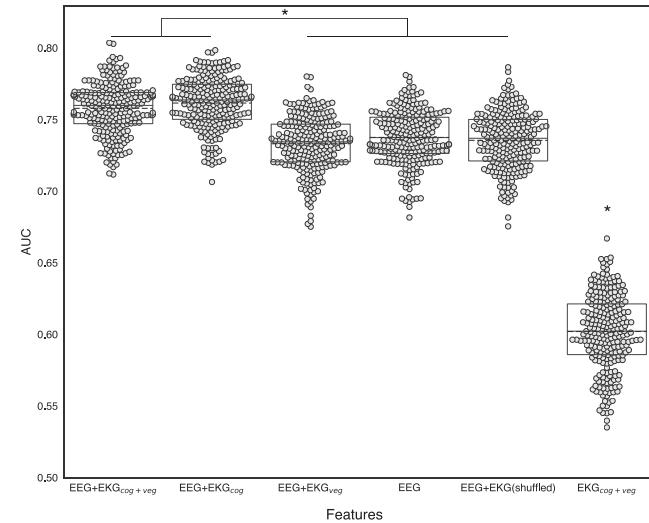

Auditory oddball paradigm

Cardiac cycle phase acceleration only in MCS

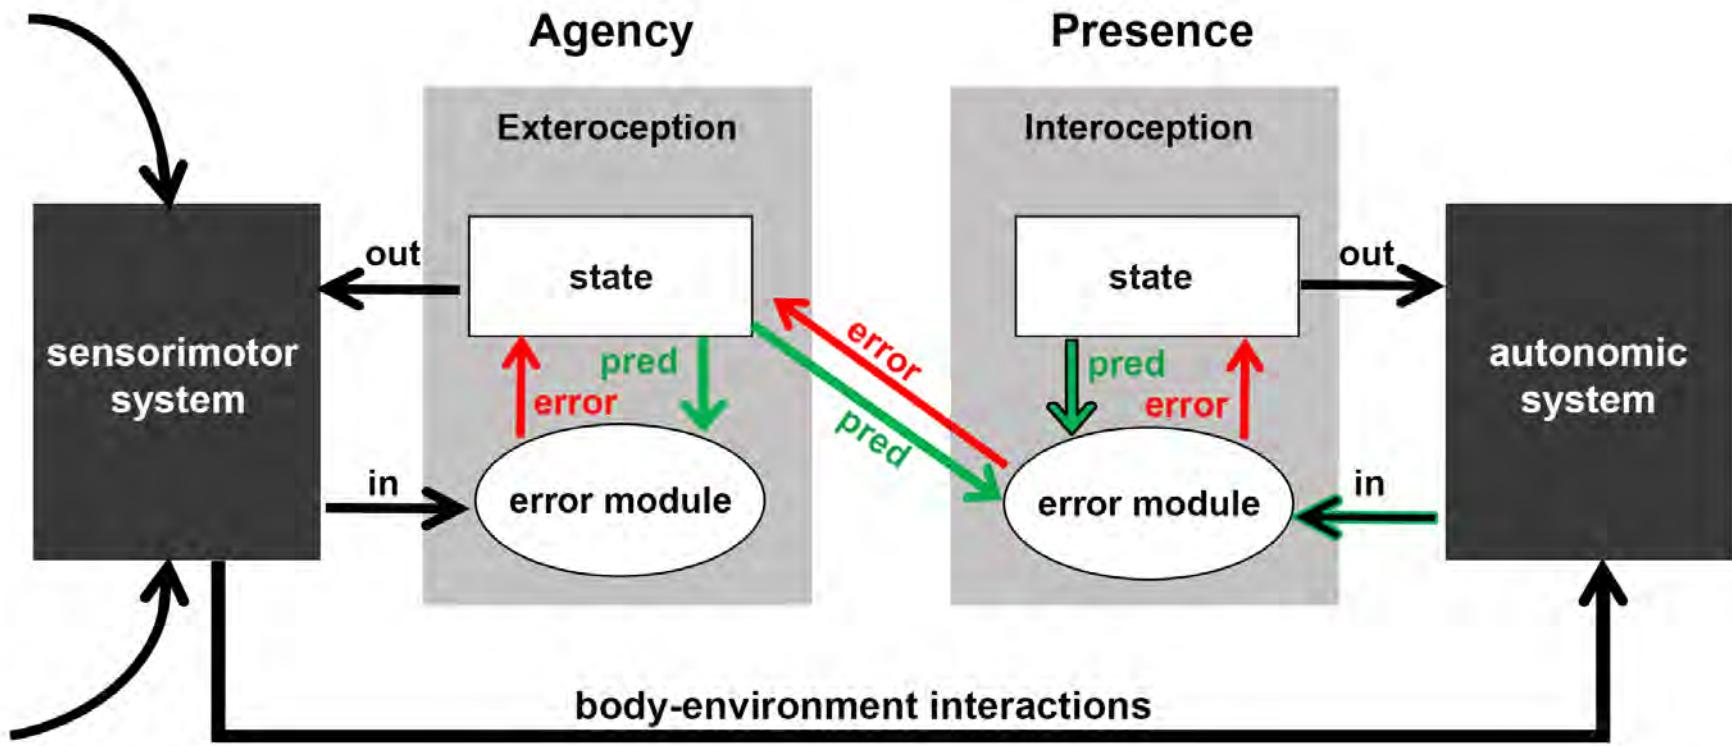

Electrocardiographic markers carry independent information from EEG

Which model for Unconsciousness?

!Apply to our lab!

Taken together...

Consciousness needs a brain which:

- is intrinsically organized
- shows complexity
- shows dynamic flexibility

Consciousness as brain-body interactions

Consciousness as active inference

Thank you
